Women's Imaging: A New Course for a New Specialty

September 27 - October 1, 2004

Women's Imaging is a new course for practitioners with a special interest in women's health. This course is designed for practitioners with a special interest in women’s health. The overall goal of this program is to provide current information on the relevant use of imaging and interventional techniques in women’s health. The program will discuss recent developments in women’s health, the role of research in the development of new strategies and concepts and future directions will be addressed, including screening of cancer and other diseases. Practical applications will be highlighted. Topics covered will include breast imaging and interventional, including minimally invasive gynecologic imaging and intervention; cancer screening advances in the evaluation of contralateral and sports related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women’s health imaging. They should be able to:

- describe the role of imaging in the diagnosis of and screening for ovarian cancer;
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRI and interventional techniques;
- recognize advances in health care and cancer screening, including the role of virtual colonoscopy and the controversy of whole-body CT screening;
- diagnose and treat the pitfalls of benign and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend smear and smear interventional techniques including fibroid embolization;
- employ state-of-the-art histopathologic imaging techniques;
- understand the indications for the use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- better understand the medical factors affecting the present and future of breast and fetal imaging and the steps you can take to protect yourself.

In light of the recent interest in health care targeted at the diagnosis and screening of medical problems specific to women’s health, this course is designed for practitioners with a special interest in women’s health. The overall goal of this program is to provide current information on the relevant use of imaging and interventional techniques in women’s health. The program will discuss recent developments in women’s health, the role of research in the development of new strategies and concepts and future directions will be addressed, including screening of cancer and other diseases. Practical applications will be highlighted. Topics covered will include breast imaging and interventional, including minimally invasive gynecologic imaging and intervention; cancer screening advances in the evaluation of contralateral and sports related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women’s health imaging. They should be able to:

- describe the role of imaging in the diagnosis of and screening for ovarian cancer;
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRI and interventional techniques;
- recognize advances in health care and cancer screening, including the role of virtual colonoscopy and the controversy of whole-body CT screening;
- diagnose and treat the pitfalls of benign and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend smear and smear interventional techniques including fibroid embolization;
- employ state-of-the-art histopathologic imaging techniques;
- understand the indications for the use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- better understand the medical factors affecting the present and future of breast and fetal imaging and the steps you can take to protect yourself.

Women’s Imaging

A New Course for a New Specialty

September 27 - October 1, 2004

Fairmont Sonoma Mission Inn & Spa
Boyes Hot Springs - Sonoma, California

In light of the recent interest in health care targeted at the diagnosis and screening of medical problems specific to women's health, this course is designed for practitioners with a special interest in women's imaging. The overall goal of this program is to provide current information on the relevant use of imaging and interventional techniques in women's imaging, to identify advances in the evaluation of osteoporosis and sports-related injuries, to review developments in breast imaging, and to anticipate the future. Emphasis will be placed on current concepts and future directions will be addressed, including screening of cancer and cardiovascular disease, the use of digital mammography, computer-aided detection, breast ultrasound, MRI and interventional techniques.

- describe the role of imaging in the diagnosis of and screening for ovarian cancer;
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRI and interventional techniques;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy, colonoscopy, imaging of osteoporosis and sports-related injuries, the controversy of whole-body CT screening;
- diagnose and treat the full range of benign and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend image and arterial interventional techniques including fibroid embolization;
- explain how the role of each breast, especially mammographic, diagnostic, and interventional procedures and the controversy of whole-body CT screening;
- understand the indications for the use of MRI in high risk obstetrical imaging and recognize the MRI appearance of breast anomalies;
- better understand the medicolegal factors affecting the present and future of breast and pelvic imaging and the steps you can take to protect yourself.

Women's Imaging

Course Co-Chairs:
Aliza Dagan, MD
Assistant Professor of Radiology
Lori M. Strachowski, MD
Assistant Clinical Professor of Radiology
Department of Radiology, University of California San Francisco and Reproductive Sciences
UCSF, San Francisco
San Francisco General Hospital

UCSF Faculty:
Peter H. Cohen, MD
Professor of Radiology and of Obstetrics, Gynecology and Reproductive Sciences
Fergur V. Cockley, MD
Assistant Professor of Radiology: Chief, Abdominal Imaging
Vickie A. Feldstein, MD
Associate Professor of Radiology: Gastroenterology, Radiology and Reproductive Sciences
Roy L. Gordon, MD
Professor of Radiology: Chief, Interventional Imaging
Jessica W.T. Leung, MD
Assistant Professor of Radiology
Mary E. Norton, MD
Associate Clinical Professor of Radiology: Director of Women’s Imaging
Edward A. Sikes, MD
Professor of Radiology: Chief, Breast Imaging
Rebecca Smith-Ellinwood, MD
Assistant Professor of Radiology
Lynne S. Svitak, MD
Professor of Radiology and Orthopaedics: Chief, Musculoskeletal Imaging
Judy Yee, MD
Assistant Clinical Professor of Radiology: Chief, Breast Imaging

The Fairmont Sonoma Mission Inn & Spa, Boyes Hot Springs, Sonoma, California

Register by August 13, 2004 and save $50 on your registration fee.
Register online and save an additional $25!

Enrollment
Pre-registration is encouraged in order to ensure that registrants receive a syllabus and CME certificate at the course.
Tuition: $675 for practicing physicians; $675 for fellows, residents, nurses and technologists (with letter of verification).
Register by August 12, 2004 and save $25! www.radiology.ucsf.edu

Tuition:
$875 -- Monday, September 27, 2004 at 7:15 a.m.
$875 -- Monday, September 27, 2004 at 7:15 a.m.

On-Site Registration:
$875 – Monday, September 27, 2004 at 7:15 a.m.

WOMEN'S IMAGING
A New Course for a New Specialty

September 27 - October 1, 2004

Fairmont Sonoma Mission Inn & Spa
Boyes Hot Springs - Sonoma, California

In light of the recent interest in health care targeted to patients exclusively of women's health, this course is designed for professionals with a special interest in women's imaging. The overall goal of this program is to provide current information on the relevant use of imaging and interventional techniques in women's diagnostic and therapeutic procedures. The course will provide a comprehensive overview of current and emerging concepts and future directions will be addressed, including screening for cancer and other maternal and infant conditions, as well as minimally invasive diagnostic and therapeutic image-guided procedures. Practical applications will be highlighted. Topics covered will include breast imaging and interventional procedures, gynecological gynecological imaging and intervention; cancer screening and diagnostic advances in the evaluation of musculoskeletal and sports-related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women's health imaging. They should be able to:

- describe the role of imaging in the diagnosis of and screening for ovarian cancer:
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRI and interventional techniques;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- diagnose and treat the pitfalls of benign and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend screening and prenatal interventional techniques including fetal embolization;
- employ state-of-the-art fetal ultrasonic, radiographic, and catheterization pearls;
- understand the indications for the use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend uterine and oophorectomy interventions;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend appropriate use of diagnostic ultrasound and MRI;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy for gastrointestinal polyps and colorectal cancer, and the controversy of whole-body CT screening;
- recognize the MRI appearance of fetal anomalies;

### Accreditation

UCSF redesignates this educational activity for a maximum of 23 category 1 credits toward the continuing education requirements of the American Registry of Radiologic Technicians. Each physician should claim only those credits that he/she actually expended in the activity.

These credits are valid 23 credits in breast imaging and 6 credits in ultrasound.

### Enroll Now!

Start enrollment online! Enroll by August 15, 2004 and save $50 on your enrollment fee! Contact the Radiology Postgraduate Education office at 415-476-5731 for more information.

This program is approved for AMA-CME category I credit and will also be accepted by the Board of Medical Examiner of the State of California for the continuing education requirements for license renewal. Each physician should claim only those credits that he/she actually expended in the activity.
Course Program

Monday, September 27, 2004

Feminine Musculoskeletal and Breast Imaging

7:15 am Continental Breakfast
7:45 Sports Related Injuries in the Female Athlete
Lynea S. Sheehy, MD
8:00 Imaging of Osteoporosis
Lynea S. Sheehy, MD
9:15 An Organized Approach to Interpreting
9.5 MRI of Patellar Tendinopathy
Edward A. Siciles, MD
10:15 draped diagnostic protocol
Edward A. Siciles, MD
11:00 Breast Ultrasound Examination
Jessica W.T. Leung, MD
11:45 Potential of Breast Cancer Risk Assessment
12:30 pm Adjourn

Tuesday, September 28, 2004

Breast Imaging

7:15 am Continental Breakfast
7:45 Reducing False-Positive Mammography Interpretations
Edward A. Siciles, MD
8:30 Mammographic Follow-up as an Alternative to Biopsy
Edward A. Siciles, MD
9:15 Current Status of and Future Applications
for Digital Mammography, Including CAD
Jessica W.T. Leung, MD
10:00 Special Imaging Issues
Jessica W.T. Leung, MD
10:15 Breast Imaging Protocol
Jessica W.T. Leung, MD
10:50 Multimodal Approach to Breast Imaging
Edward A. Siciles, MD
11:30 Current Status of Future Applications for Breast MR
Jessica W.T. Leung, MD
12:30 pm Adjourn

Wednesday, September 29, 2004

Women’s Health Screening and Malignant Gynecologic Conditions

7:15 am Continental Breakfast
7:45 Whole Body CT Screening
Fergus V. Cooley, MD
8:30 Color Cancer Screening and Virtual Colonoscopy
Raj, Yes, MD
10:00 Ovarian Cancer Screening and Ultrasound
Lori M. Strachan, MD
10:10 Reoces
10:50 Referral of Adenexal Masses at CT-MRI
Lori M. Strachan, MD
11:00 Ovarian Cancer Staging
Alia-Aygun, MD
11:15 US of the Uterus and Hysterosonography
Katie A. Fordenber, MD
12:30 pm Adjourn

Thursday, September 30, 2004

Imaging and intervention of benign gynecologic conditions

7:15 am Continental Breakfast
7:45 Epochic Pregnancy
Lori M. Strachan, MD
8:00 MRI of Benign Gynecologic Conditions
Alia Aygun, MD
9:00 MRI of Perforated Uterine Myoma
Rebecca Smith-Boyd, MD
10:00 US of the Uterus and Hysterosonography
Katie A. Fordenber, MD
11:00 Abdominal Intervention
Rebecca Smith-Boyd, MD
12:30 pm Adjourn

Fetal Imaging

8:30 Mammographic Follow-up as an Alternative to Biopsy
Edward A. Siciles, MD
9:15 An Organized Approach to Breast Imaging
Jessica W.T. Leung, MD
10:00 Breast Imaging Protocol
Jessica W.T. Leung, MD
10:50 Multimodal Approach to Breast Imaging
Edward A. Siciles, MD
11:30 Current Status of Future Applications for Breast MR
Jessica W.T. Leung, MD
12:30 pm Adjourn

Fetal Imaging

7:45 CT/MRI in the Pregnant Patient
Fergus V. Coakley, MD
8:30 MR of the Uterus and Hysterosonography
Katie A. Fordenber, MD
9:15 Avoiding the Malpractice Crisis in OB-GYN Ultrasound
Peter W. Calen, MD
10:00 Assessment and Management of Multiple Pregnancies
Roy L. Gordon, MD
11:00 Ultrasound Evaluation of Ovarian Growth Adenohormone
Peter W. Calen, MD
11:45 CT/MRI in the Pregnant Patient
Fergus V. Coakley, MD
12:30 pm Adjourn

Accreditations
The University of California, San Francisco School of Medicine (UCSF) is accredited by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians. The University of California, San Francisco School of Medicine (UCSF) is accredited by the Accreditation Council for Continuing Education in Health Professions (ACCME) to provide continuing education for nurses. Physicians should claim only those credits that they actually spend in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound.

Program/registration information
This program provides approved Category 1 credits toward the continuing education requirements for license renewal of the California Board of Registered Nurses at four for each four-credit module. Nurses may report credits toward the general category. For more information, contact the state board of nursing.

UCSF designates this educational activity for a maximum of 23 category 1 credits toward the requirements of the American Registry of Diagnostic Medical Sonographers. Each physician should claim only those credits that they actually spend in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound.

Nonphysician participants should contact the Radiology Postgraduate Education office at 415-476-5731 for more information!

For your convenience, we encourage you to enroll early, as full payment guarantees a space in this course.

Course enrollment
Register by Friday, August 13, 2004, and save $50 on your enrollment fee!

Log onto cme.ucsf.edu and save $25 on your registration fee! [Course #: RAD 0504]

ENROLL ONLINE!

You may also register by mail or phone.

PAYMENT OPTIONS

Check or money order payable to UC Regents. Please include the full payment! Incomplete registration and/or request for request of a refund will be handled per the terms set by the Radiology Postgraduate Education office. Request for request number must be done prior to 4:00 pm, Pacific time.

Summary

Use of this program may be used for continuing medical education and continuing education for nurses. Physicians should claim only those credits that they actually spend in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound. Nonphysician participants should contact the Radiology Postgraduate Education office at 415-476-5731 for more information!

Payment may be made by credit card or check via money order enclosed or via check or credit card by phone or mail. Checks must be drawn on a U.S. bank.

Centre for Continuing Education at UCSF www.cme.ucsf.edu

UCSF designates this educational activity for a maximum of 23 category 1 credits toward the requirements of the American Registry of Diagnostic Medical Sonographers. Each physician should claim only those credits that they actually spend in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound.

Nonphysician participants should contact the Radiology Postgraduate Education office at 415-476-5731 for more information.

Course Enrollment

Register by Friday, August 13, 2004, and save $50 on your enrollment fee!

Log onto cme.ucsf.edu and save $25 on your registration fee! [Course #: RAD 0504]

ENROLL ONLINE!

You may also register by mail or phone.

PAYMENT OPTIONS

Check or money order payable to UC Regents. Please include the full payment! Incomplete registration and/or request for request of a refund will be handled per the terms set by the Radiology Postgraduate Education office. Request for request number must be done prior to 4:00 pm, Pacific time.

Summary

Use of this program may be used for continuing medical education and continuing education for nurses. Physicians should claim only those credits that they actually spend in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound. Nonphysician participants should contact the Radiology Postgraduate Education office at 415-476-5731 for more information!

Women’s Neurovascular and Neurocognitive Conditions

7:15 am Continental Breakfast

8:00 am The Female Athlete: Women’s Health Issues in Training and Competition
  -- John D. Lipton, MD
  -- Karen W. Snyder, RN

8:15 am Imaging of Orthopedic Trauma
  -- Lynn S. Steinback, MD

8:30 am An Organized Approach to Interpreting Mammograms
  -- Edward A. Sidney, MD

8:45 am Radiologic Diagnosis of the Breast
  -- Joyce L. Gordon, MD

9:00 am Breast Ultrasonography (interactive)
  -- Jessica W.T. Leung, MD

9:15 am Breast Magnetic Resonance Imaging
  -- Edward A. Sidney, MD

9:30 am Breast conference

10:00 am Breast Magnetic Resonance Examinations
  -- Edward A. Sidney, MD

10:15 am Attenuation-Based Breast Imaging Techniques
  -- Lon M. Strachowski, MD

10:30 am U.S./U.K. Comparison of Screening Mammography
  -- Rebecca Smith-Breiman, MD

10:45 am Adjourn

Tuesday, September 28, 2004

Breast Imaging

7:15 am Continental Breakfast

7:45 am False Positive Mammmography Interpretations
  -- Edward A. Sidney, MD

8:30 am Mammographic Follow-up as an Alternative to Biopsy
  -- Edward A. Sidney, MD

9:15 am Current Status of Digital Radiography
  -- Jessica W.T. Leung, MD

10:00 am Digital Mammography

10:15 am Breast Interventional Imaging
  -- Jessica W.T. Leung, MD

10:30 am Breast Interventional Imaging
  -- Edward A. Sidney, MD

11:15 am Adjuvant Agents for Breast Imaging
  -- Jessica W.T. Leung, MD

12:30 pm Adjourn

Wednesday, September 29, 2004

Women’s Health Screening and Mammographic Gynecologic Conditions

7:15 am Continental Breakfast

7:45 am Whole Body CT Screening
  -- Fergus Y. Coley, MD

8:30 am Colorectal Cancer Screening and Virtual Colonoscopy
  -- Judy Yee, MD

8:45 am Colorectal Cancer Screening and Colonoscopy
  -- Lori M. Strachowski, MD

9:00 am Screening Colorectal Carcinoma: Current Status and Future Directions
  -- James J. Heitjan, MD

9:15 am Two-dimensional Ultrasonography
  -- Alix A. Gavray, MD

9:30 am Three-dimensional Ultrasonography
  -- Alix A. Gavray, MD

10:00 am Abdominal Aortic Aneurysm: A New Approach to Screening
  -- Alix A. Gavray, MD

10:15 am Abdominal Aortic Aneurysm: A New Approach to Screening
  -- Alix A. Gavray, MD

10:30 am Adjourn

Thursday, September 30, 2004

Imaging and intervention of Benign Gynecologic Conditions

7:15 am Continental Breakfast

7:45 am Gynecologic Oncology
  -- Lori M. Strachowski, MD

8:30 am MRI of Benign Gynecologic Conditions
  -- Alix A. Gavray, MD

9:00 am Breast MRI

9:15 am Breast MRI

9:30 am Breast MRI

10:00 am Breast MRI

10:15 am Breast MRI

10:30 am Breast MRI

10:45 am Breast MRI

11:00 am Breast MRI

11:15 am Breast MRI

11:30 am Breast MRI

11:45 am Breast MRI

12:30 pm Adjourn

Fetal Imaging

7:15 am Continental Breakfast

7:45 am Fetal Sonology: A Lexicon
  -- Peter W. Callen, MD

8:30 am US of the Uterus and Hysterosonography
  -- Vickie A. Feldstein, MD

9:00 am Abdominal Aneurysm: A New Approach to Screening
  -- James J. Heitjan, MD

9:15 am Adenexal Intervention
  -- Roy L. Gordon, MD

9:30 am Ultrasound of the Uterus and Hysterosonography
  -- Vickie A. Feldstein, MD

10:00 am Breast Ultrasound

10:15 am Breast Interventional Ultrasound
  -- Peter W. Callen, MD

10:30 am Breast Interventional Ultrasound
  -- Peter W. Callen, MD

11:00 am Breast Ultrasound

11:15 am Breast Ultrasound

11:30 am Breast Ultrasound

11:45 am Breast Ultrasound

12:30 pm Adjourn

In-Brief for USG Radiology Course Enrollment RAD 05 004

Women’s Imaging

September 27 - October 1, 2004

Fairmont Sonoma Mission Inn
Sonoma, California

Course Registration:
Course: USG Radiology
Course Code: RAD 05 004
Course Type: USG Radiology
Course Price: $775

Course Description:
This course will focus on the diagnosis and management of malignancies and benign disorders of the female reproductive system. The course content is designed to provide the clinician with the most current information regarding the use of USG in identifying and managing the female reproductive system.

Eligibility Requirements:
Participants must be licensed radiographers who are either certified by the Registry of Radiologic Technologists or are eligible for Registry examination. Participants must also have a current active license to practice in the state where the course will be conducted.

Accreditation:
The Continuing Accreditations in USG Radiology is approved for 23 Hours of Accreditation in USG Radiology.

Registration:
Register by August 15, 2004

For more information, please call 415-502-1795 or visit our website:
www.ucsf.edu/contmed.

ENROLL ONLINE!

To register for the course, please visit the website:
www.ucsf.edu/contmed.

UCSF designates this educational activity for a maximum of 23 category 1 credits toward the continuing education requirements for radiologic technologists.

Accreditation:
This course is approved by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

Accreditation:
This course is approved by the Accreditation Council for Continuing Medical Education (ACCME) to provide continuing medical education for physicians.

Payment:
Payment for continuing education credits may be provided by continuing education organizations, medical society organizations, or other organizations.

Course Program

Monday, September 27, 2004

7:15 am Continental Breakfast
7:45 Sports Related Injuries in the Female Athlete Lyse S. Sheepka, MD
8:15 Imaging of Osteoporosis Lyse S. Sheepka, MD
9:15 An Organized Approach to Interpreting Diagnostic Imaging Examinations Edward A. Sicks, MD
10:15 An Organized Approach to Performing Breast Ultrasound Examination Edward A. Sicks, MD
11:00 Breast Ultrasound Examination Jessica W.T. Leung, MD
11:45 Breast Imaging: An Invaluable Diagnostic Tool Lori M. Strachowski, MD
12:30 pm Adjourn

Tuesday, September 28, 2004

7:30 am Continental Breakfast
7:45 Reducing False-Positive Mammography Interpretations Edward A. Sicks, MD
8:30 Mammographic Follow-up as an Alternative to Biopsy Edward A. Sicks, MD
9:15 Current Status of and Future Applications for Digital Mammography, Including CAD Jessica W.T. Leung, MD
10:00 Radiolymphageoscopy Edward A. Sicks, MD
10:30 Breast Imaging Edward A. Sicks, MD
11:00 Breast Ultrasound Examination Jessica W.T. Leung, MD
11:30 Mammary Angioplasty of Breast Imaging Edward A. Sicks, MD
11:45 Current Status of and Future Applications for Breast MR Jessica W.T. Leung, MD
12:30 pm Adjourn

Wednesday, September 29, 2004

7:15 am Continental Breakfast
7:45 Whole Body CT Screening Fergus V. Coakley, MD
8:30 Colon Cancer Screening and Virtual Colonoscopy Judy Yee, MD
9:00 Ovarian Cancer Screening and Colorectal Edward A. Sicks, MD
10:00 Radiosurgery Edward A. Sicks, MD
10:30 Transabdominal Adenomatous Mucosa at CT MRI Edward A. Sicks, MD
11:00 Ovarian Cancer Staging Alia Qayyum, MD
11:30 Adenomatous Polyps and Intra-Uterine Malformation Alia Qayyum, MD
12:30 pm Adjourn

Thursday, September 30, 2004

7:15 am Continental Breakfast
7:45 Esophageal Pregnancy ............................................................... Lori M. Strachowski, MD
8:00 MRI of Benign Gynecologic Disease Alia Qayyum, MD
8:30 MRI of Benign Gynecologic Disease Alia Qayyum, MD
10:00 Reces
10:15 Ultrasound Intervention Ray L. Gordon, MD
11:00 US of the Uterus and Hysterosonography Vickie A. Feldstein, MD
11:45 Adenomatous Polyps and Intra-Uterine Malformation Ray L. Gordon, MD
12:30 pm Adjourn

Fetal Imaging

Friday, October 1, 2004

7:15 am Continental Breakfast
7:45 Fetal Sonology: A Lexicon Peter W Callen, MD
8:30 U.S./U.K. Comparison of Screening Mammography ................. Rebecca Smith-Bindman, MD
9:15 Avoiding the Malpractice Crisis in OB-Gyn Ultrasound .............. Peter W Callen, MD
10:00 Recess
10:15 Assessment and Management of Multiple Pregnancies ............... Peter W Callen, MD
11:45 Ultrasound Evaluation of Fetal Growth Abnormalities Peter W. Callen, MD
12:30 pm Adjourn

Register by Friday, August 13, 2004 and Save $50 on your enrollment fee! (Course #: RAD 05 04)

Accreditations:
The University of California, San Francisco School of Medicine (UCSF) is accredited by the Accreditation Council for Continuing Medical Education (ACME) to provide continuing medical education for physicians.

UCSF designates this educational activity for a maximum of 23 category 1 credits toward the continuing education requirements for license renewal. Each physician should claim only those credits that he/she actually spent in the activity. These credits are inclusive of 7.5 credits in breast imaging and 6 credits in ultrasound.

Note: This course is approved for Category 1 credit in the AMA Physician Recognition Award program. Physicians should claim only those credits that he/she actually spent in the activity. UCSD Technologists: This program is approved for AAROA Category 1 credit and will cover all educational requirements in the AART 707-2 requirement for Category 1 credit in Category II if they attend the entire program.

Method of Payment
Payment may be made by credit card or by check/money order issued in U.S. dollars in U.S. currency. No request for foreign checks will be honored. Written request for enrollment confirmation must be made at least 2 weeks prior to the course start date. Cancellation, requests for confirm by mail: Radiology Postgraduate Education office at 415-476-5731 or by phone: 415-476-5381.

Cancellation
A full refund of the enrollment fee, less $75, will be made upon receipt of a written request made
2 weeks prior to the course start date. A $75 cancellation fee will be charged for all late requests.

Credit Information:
Frequent Attendance Attend our UCSF Radiology CME course and receive the following credits: CR-12, 60 hours of medical education for physicians. This program is approved for AMA-CMA category 1 credit and will be accepted toward meeting the continuing education requirements for license renewal. Each physician should claim only those credits that he/she actually spent in the activity.

Women’s Imaging

In light of the recent interest in health care targeted at the diagnosis and screening of medical problems specific to women’s health, this course is designed for practitioners with a special interest in women’s imaging. The overall goal of this program is to provide current information on the relevant use of imaging and interventional techniques in women’s imaging. Women’s imaging is at the forefront of the explosion in the use of technology and interventional techniques, so concepts and future directions will be addressed, including screening of cancer and osteoporosis, digital mammography, computer-aided detection, breast ultrasound, MRT and interventional techniques. Practical applications will be highlighted. Topics covered will include breast imaging and interventions, fetal imaging, gynecological gyno-pathology, and interventions. Women’s imaging advances in the evaluation of co-populations and sports related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women’s health imaging. They should be able to:

- describe the role of imaging in the diagnosis of and screening for ovarian cancer;
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRT and interventional techniques;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy, breast MR imaging and breast-related interventions and the controversy of whole-body CT screening;
- diagnose and treat primary and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend imaging and intervention techniques including fibroid embolization;
- employ state-of-the-art fetal sonographic diagnostic pearls;
- understand the indications for use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- understand the indications for the use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend uterine and adnexal interventional techniques;
- diagnose and list the pitfalls of benign and malignant gynecologic conditions employing all current imaging modalities and protocols;
- understand current concepts and future directions will be addressed, including screening of cancer and osteoporosis, digital mammography, computer-aided detection, breast ultrasound, MRT and interventional techniques. Practical applications will be highlighted. Topics covered will include breast imaging and interventions, fetal imaging, gynecological gyno-pathology, and interventions. Women’s imaging advances in the evaluation of co-populations and sports related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women’s health imaging. They should be able to:

- describe the role of imaging in the diagnosis of and screening for ovarian cancer;
- compare breast imaging modalities, including digital mammography, computer-aided detection, breast ultrasound, MRT and interventional techniques;
- recognize advances in health and cancer screening, including the role of virtual colonoscopy, breast MR imaging and breast-related interventions and the controversy of whole-body CT screening;
- diagnose and treat primary and malignant gynecologic conditions employing appropriate use of diagnostic ultrasound and MRI;
- appropriately perform and recommend imaging and intervention techniques including fibroid embolization;
- employ state-of-the-art fetal sonographic diagnostic pearls;
- understand the indications for use of MRI in high risk obstetrical imaging and recognize the MRI appearance of fetal anomalies;
- appropriately perform and recommend uterine and adnexal interventional techniques;
- diagnose and list the pitfalls of benign and malignant gynecologic conditions employing all current imaging modalities and protocols;
- understand current concepts and future directions will be addressed, including screening of cancer and osteoporosis, digital mammography, computer-aided detection, breast ultrasound, MRT and interventional techniques. Practical applications will be highlighted. Topics covered will include breast imaging and interventions, fetal imaging, gynecological gyno-pathology, and interventions. Women’s imaging advances in the evaluation of co-populations and sports related injuries, and fetal imaging. At the completion of the course, registrants will have increased knowledge of current imaging technology and protocols applicable to women’s health imaging. They should be able to:
