and Vice-Chair, Department of Medicine;
Co-Director, UCSF-GIVI Center for
AIDS Research, University of California
San Francisco; Coeditor-in-Chief, Journal of
Acquired Immune Deficiency Syndromes
This course provides the active intermediate to advanced clinician with a comprehensive review of the science and application of HIV therapy. Lectures are presented by a group of leading clinicians and researchers who are also dedicated to teaching in their area of expertise. Topics emphasized include antiretroviral initiation, regimen simplification, and antiretroviral treatment of highly experienced patients. The course devotes serious attention to end-organ complications of HIV/AIDS and lectures on bone, cardiovascular, neurological as well as dermatological, and pulmonary sequelae are featured throughout the conference. HIV in women, including reproductive issues will be explored thoroughly and two small group sessions on HIV in transgenders will be offered as well. Although the course is designed for the intermediate to advanced clinician, this year we will feature a learning track for ambitious new clinicians that emphasizes the basics of antiretroviral therapy and HIV pharmacology.

Other new topics for 2011 include a dynamic opening plenary session on the state of HIV Medicine with Paul Volberding presenting “Before the Lifeboat”, Diane Havlir speaking on “The Way Forward” and Steven Deeks wrapping up the session and answering the question of “How Close are we to a Cure”. Dr. Tierona Low Dog will speak on HIV and Integrative Medicine and review integrative therapeutic options for strengthening the immune system, managing inflammation and medication toxicity. The hepatitis update has been expanded to address all the new therapies that have emerged and a case-based session will update opportunistic infections and new management strategies. A provocative neurology update and a thorough pulmonary update will return to schedule and we will explore HIV in the prison system with “HIV behind Bars".

Motivational Interviewing and Skills for Well Being will be offered again so participants can continue to develop the skills they learned at last year’s course.

This symposium is presented by the Division of HIV/AIDS – San Francisco General Hospital, Department of Medicine, University of California, San Francisco, School of Medicine.
