Presented by the
Department of Pediatrics
School of Medicine

UCSF Benioff Children’s Hospital

The program endeavors to provide research, academic, and clinical information in a format that emphasizes the practical application of current concepts relevant to office practice and to professionals involved in the care of children. Pediatric, Family Medicine, and Emergency Room Physicians, as well as Physician Assistants, Nurses, and Nurse Practitioners will benefit from their participation in this program. Nationally recognized guest faculty will present a series of lectures that are complemented by UCSF faculty and Bay Area experts speaking about a variety of other current and controversial pediatric issues, which will ultimately result in better care for children of all ages, infants through adolescents. This year’s course focuses on endocrinology, infectious diseases, gastroenterology, neonatal neuro-critical care, and autism.

Upon completion of this conference, participants should be able to:

• Evaluate and manage Vitamin D dilemmas, fractures in growing children, and hypercalcemia;
• Implement strategies for understanding and managing autism, respiratory function in VLBW infants, utilizing alternative and complementary therapies, and for supporting gender non-conforming youth;
• Evaluate and apply effective treatment for asthma, gastroesophageal reflux, hemangiomas, and annular lesions;
• Improve evaluation of child abuse, head trauma, concussion, ophthalmic injuries, and orthopedic problems;
• Develop strategies for diagnosis and treatment of hepatitis, rabies, thyroid disorders, and neonatal seizures;
• Understand and utilize new technologies in neonatal neuro-critical care – involving hypothermia, neuroprotection, and neuroradiology.
