June 24-25, 2011
Every two years, the University of California, Division of Plastic and Reconstructive Surgery sponsors a scientific program to review advances in our field. Our full time and clinical faculty, residents and fellows, and other practicing plastic surgeons are invited to participate in the program for discussion of clinical innovations, new technology, and innovative research. As we did at the last symposium, we are encouraging each presenter of clinical outcomes to show “ten in a row” – 10 consecutive cases so that a true range of outcomes can be seen.

The main goal of this program will be to provide an update on aesthetic and reconstructive procedures used in everyday practices of plastic surgery. We plan to cover controversial areas in aesthetic surgery including facial surgery and body contouring, breast reconstruction, cleft and craniofacial surgery, hand and microsurgery, wound care, stem cell and new materials research. Discussion is an important part of the program; there will be ample time for questions and discussion of the presentations.

This year the meeting will be held at the historic Sir Francis Drake Hotel near San Francisco’s landmark Union Square. We hope to see you there!

**OBJECTIVES**

An attendee completing this course should be able to increase skills and strategies to:

- Apply new techniques and outcomes in facial aesthetic surgery (specifically facelift, fat transplantation, rhinoplasty);
- Apply new techniques and outcomes in body contouring surgery (breast augmentation, post-bariatric surgery);
- Improve assessment of early and late reconstruction of craniofacial deformities;
- Improve selection of techniques in breast reconstruction – DIEP flaps, other flaps, expander/implant reconstruction;
- Incorporate research updates on stem cells, angiogenesis, and wound healing.
