Our 34th annual course, “Advances in Heart Disease,” will again strive to present topics that highlight new evidence-based medicine findings reported within the last one to two years that impact clinical practice. These will range across a variety of cardiologic subspecialty interests including preventive cardiology, congenital heart disease, interventional cardiology, electrophysiology, cardiac imaging, cardiovascular pharmacotherapy, clinical cardiology, and cardiac surgery.

Our faculty will include a distinguished group of visiting academicians from North America together with outstanding teachers and clinicians from the University of California, San Francisco. We plan to offer adequate time after each lecture to facilitate discussion with audience questions directed to the faculty.

TARGET AUDIENCE
This course is intended for cardiovascular specialists, practicing cardiologists, internists, family physicians, cardiovascular and critical care nurses, and paraphysicians.

EDUCATIONAL OBJECTIVES
This course is intended to facilitate changes in practice with respect to:

- Providing the best management of coronary heart disease, hypertension, lipid disorders, diabetes, systolic and diastolic heart failure, atrial fibrillation and flutter, STEMI and non-STEMI, thromboembolic disease;
- Refining considerations for atrial fibrillation, atrial flutter, and ventricular tachycardia ablation;
- Applying the best considerations of percutaneous interventions for valvular heart disease;
- Improving the use of anti-platelet and anti-coagulation therapy for cardiovascular diseases;
- Recognizing risk stratification of cardiovascular disease;
- Optimizing the management of peripheral artery disease and pulmonary hypertension;
- Recognizing that pathophysiology of diseases and treatment options differ among racial and ethnic groups.
